**HAIR REMOVAL LASER**  
— PRECISION —

Quick Start Guide

## GET TO KNOW YOUR TRIA HAIR REMOVAL LASER PRECISION

## BEFORE FIRST TREATMENT

For detailed directions and important safety warnings, please read the complete *Instructions for Use* guide before use.

**ACTIVATE:** A quick, one-time activation is required before you can use the Tria Laser Precision.

In the US: visit [tria beauty.com/activate](http://tria beauty.com/activate)

In the UK: visit [tria beauty.co.uk/activate](http://tria beauty.co.uk/activate)

**CHARGE:** You will also need to charge the Tria Laser Precision for at least 2 hours before you use it or anytime the battery is empty. Each battery charge lasts approximately 15-20 minutes.

## HOW TO TREAT

Before every treatment, shave, clean and dry the area you wish to treat. Before your first full treatment on any new area, perform a patch test in that area. Repeat treatments **every 2 weeks** for up to 3 months or until you're satisfied with results.

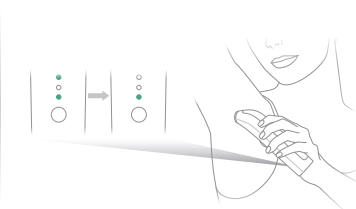

### 1 TURN ON DEVICE

Unplug the Tria Laser Precision from the battery charger and press the power button.

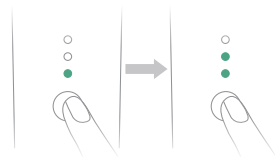

### 2 UNLOCK

Unlock by holding the device tip with the built-in skin sensor against the skin you wish to treat. If the Tria Laser Precision is safe for your skin tone, the laser will emit a series of beeps and unlock.

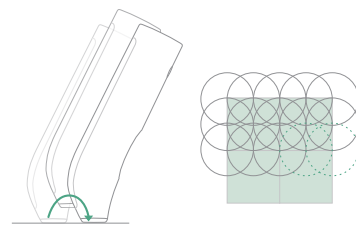

### 3 SET THE TREATMENT LEVEL

Press the power button to adjust levels. For best results, treat at the highest level that you can tolerate. In a clinical study, higher levels were found to be 2-3 times more effective.

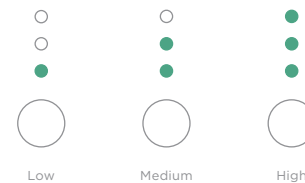

### 4 TREAT. HOLD FOR ONE BEEP.

Touch and hold the treatment window to the skin until you hear a beep. Then, lift and place the laser back on the skin so that it overlaps the previous spot by about 1/4 inch, or 5 mm.

## TREATMENT GUIDE

Treat in an overlapping pattern until you have completely covered the area you want to treat. Use this guide as an example of how many minutes you may need to treat each area when treating on Medium. Treatment times will be shorter when treating on Low and longer when treating on High.

Always follow the treatment instructions and warnings provided in the *Instructions for Use* booklet.

- Each battery charge lasts for about 15-20 minutes. You may need to recharge if treating multiple areas.
- Facial hair is only cleared for women, cheek line downward.

## TREATMENT AREA

The Tria Laser Precision is specially designed to treat small, sensitive areas, such as your underarms and bikini line. Say good-bye to constant shaving, waxing and skin irritations and say hello to silky, smooth skin.

### CHECK YOUR SKIN TONE

The Tria Laser Precision is designed to work on fair to light brown skin tones and light brown to black body hair. It does not work on white, grey, blonde or red hair. If your skin tone matches any of the skin tones labeled "Not Safe" for treatment, then DO NOT USE the Tria Laser Precision.
